DETAILED ACTION

Introduction

1. Applicant's arguments, see Remarks, filed 25 October 2007, with respect to the rejection(s) of claim(s) 1 through 23 under 35 USC §102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Horton, III (U.S. Patent No. 5,722,797) in view of Meyer-Haake (U.S. Patent No. 4,217,848).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Page 3

4. Claims 1 through 3, 6 through 19 and 21 through 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horton, III (U.S. Patent No. 5,722,797) in view of Meyer-Haake (U.S. Patent No. 4,217,848).

Horton, III '797, as best seen in Figure 1, shows a floating spar structure (10) attached to a heave plate (30), said floating structure including a deck (34). Horton, III '797 discloses the invention substantially as claimed. Horton, III '797 fails to teach the step of vertically positioning the floating structure with the heave plate along a common vertical axis.

Meyer-Haake '848 teaches a method of installing a floating installation wherein a heave plate (12) is structurally attached to a floating structure (16) at an offshore site (see Figs. 1-5d) along a common vertical axis. It would have been considered obvious to one of ordinary skill in the art to modify the method disclosed by Horton, III '797 such that it would include the step of vertically positioning the floating structure with the heave plate along a common vertical axis as taught by Meyer-Haake '848. The motivation would have been to reduce the complication and cost involved in assembling the structure on land and then transporting to an offshore site.

5. Claims 4, 5 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Horton, III (U.S. Patent No. 5,722,797) in view of Meyer-Haake (U.S. Patent No. 4,217,848) as applied to claim 3 above, and further in view of Haselton (U.S. Patent No. 3,986,471).

The combination of Horton, III '797 and Meyer-Haake '848 fails to teach a variable buoyancy heave plate.

Haselton '471 teaches a variable buoyancy heave plate (26). It would have been obvious to one of ordinary skill in the art to further modify the method and structure taught by the

Art Unit: 3671

combination of Horton, III '797 and Meyer-Haake '848 such that it would include a variable buoyancy heave plate as taught by Haselton '471. The motivation would have been to include means for controlling the heave, pitch and roll of the structure.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tara L. Mayo whose telephone number is 571-272-6992. The examiner can normally be reached on Monday through Friday 8:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas B. Will can be reached on 571-272-6998. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
